EVAPORATED FUEL TREATMENT DEVICE OF
INTERNAL COMBUSTION ENGINE

RESTRICTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to an evaporated fuel treatment device based on a differential pressure detection means, classified in class 73, subclass 118.1.
- II. Claim 8, drawn to an evaporated fuel treatment device based on a time based pressure change, classified in class 73, subclass 118.1.

The inventions are distinct, each from the other because Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions have been disclosed as different embodiments wherein the mode of operation of one embodiment (invention) is different than the mode of operation of the other embodiment (invention).

Furthermore, different “embodiments” demonstrate that one invention is not used together with the other invention.

Art Unit: 2855

Because these inventions are distinct for the reasons given above and the search required for Invention I is not required for Invention II, restriction for examination purposes as indicated is proper.

The Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

The Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
